Mini Project Report

Submitted By: Shubh Gupta

Reg. No.: 25BAI10562

Branch : BTech CSE(AIML)

Course Code : CSE0001 - Digital Literacy

Under The Guidance Of: Dr. Kannan

Date : 29 March 2026

Introduction

In today's digital age, having strong digital literacy skills is essential for students to succeed academically and professionally. This project, assigned as part of the Digital Literacy course, focuses on developing practical knowledge of digital tools, online communication, and cyber safety. As a Digital Ambassador, the objective was to create awareness among peers about responsible and effective use of technology.

The project includes multiple tasks such as designing an infographic, building a professional online presence, practising coding on platforms like HackerRank, creating a Google Form for awareness, and understanding cybercrime through a case study. It also emphasizes the importance of email etiquette and responsible social media behavior.

Overall, this project provides a hands-on learning experience to improve technical, communication, and online safety skills, preparing students to navigate the digital world confidently and responsibly.

Task 1 -Digital Literacy Infographic

For this task I have created a one-page infographic titled “Essential Digital Skills for Students” using Canva a user-friendly online design tool. The purpose of my design is to help my batchmates understand the concept of digital literacy and its importance in today’s academic and professional environment

The infographic covers multiple key topics, including what digital literacy is, useful digital tools, safe internet practices, and email etiquette. I explained digital literacy as the ability to find, evaluate, create, and communicate information using digital technologies. I also included examples of tools such as Google Drive, Canva, and Zoom that students commonly use. Additionally, I highlighted important safety practices like using strong passwords, identifying phishing scams, and protecting personal data. The section on email etiquette focuses on writing professional emails with proper subject lines, greetings, and tone.

While creating this design, I found it interesting to organize complex information into a visually appealing and easy-to-understand format. However, maintaining a balance between design and content without overcrowding the slide was slightly challenging. Overall, this activity enhanced my creativity and improved my understanding of digital literacy concepts.

Task 2 - Professional Digital Presence

For this task, I had set up and updated my profiles on **GitHub, LinkedIn, and Kaggle**, as these platforms are essential for building a strong professional presence in the technology field. GitHub is widely used for hosting and managing code, collaborating on projects and showcasing technical skills. I created a profile README repository that includes my name, branch, year and a brief statement about my learning goals. LinkedIn is a professional networking platform where I added my educational details, including my current degree, institution, and expected year of graduation to create a credible online profile. Kaggle is a platform focused on data science and machine learning where users can work on datasets, participate in competitions, and enhance their analytical abilities.

Over the next four years, I plan to consistently update my GitHub with projects, contribute to open-source communities, and strengthen my development skills. On LinkedIn, I aim to build meaningful professional connections, share my achievements, and explore internship opportunities. On Kaggle I will actively participate in competitions and practice real-world datasets to improve my problem-solving and data analysis skills. This will help me develop a strong digital portfolio and career readiness.

Task 3 -Explore Coding & Collaboration Platforms

For this task, I had used **HackerRank** for coding practice and **Google Forms** for collaboration and awareness building. On HackerRank I created an account and completed a intermediate-level problem which helped me understand basic in python programming logic and problem-solving techniques. Practising on this platform improved my confidence in coding and introduced me to structured problem solving approaches used in technical interviews

For the collaboration part, I created a **Digital Literacy Awareness Quiz** using Google Forms. The quiz consists of five questions, including both multiple-choice and short-answer types, focusing on topics such as online safety, digital responsibility, and awareness. I also linked the responses to a Google Sheet, which helps in automatically collecting and analyzing data.

These tools will be highly beneficial for my academic journey. HackerRank will help me regularly practise coding and strengthen my technical skills while Google Forms and Sheets will assist in conducting surveys orgaanizing data and collaborating effectively on projects Overall this task enhanced both my technical and digital collaboration skills which are essential for my future studies and career

Task 4 -Digital Communication & Email Etiquette

A common example of poor digital communication is when a student send an email to a professor without a proper subject line greeting, or clear message. Sending a message like “Send deadline pls” without context can create confusion and appear disrespectful. In such cases, the professor may ignore the email or misunderstand the request, leading to missed opportunities or delays.

This situation highlights the importance of maintaining professionalism in online communication. The student should have written a clear subject line, used a respectful greeting, and explained the request properly with valid reasons.

From this task, I learned that effective digital communication requires clarity, politeness, and proper structure. Using correct email etiquette and responsible social media behavior helps in building a positive digital image and ensures that messages are understood correctly. These skills are essential for academic and professional success.

Task 5 - Cybercrime Awareness (Phishing)

While researching phishing attacks, what surprised me the most was how **highly convincing and realistic** these scams have become. Many phishing mails messages, or websites closely imitate trusted organizations such as banks universities, or popular online platforms. They often use official logos, professional language, and urgent messages to trick users into sharing sensitive information. I also found it concerning that even digitally aware people can fall victim if they act quickly without verifying the source.

This research made me understand the importance of being cautious and alert while using the internet. One habit I will personally change is to **always verify the authenticity of emails, links, and requests before taking any action**, especially those asking for personal or financial details. I will carefully check website URLs, avoid clicking on suspicious links, and ensure that the source is genuine before responding.

Overall, this task increased my awareness of online threats and encouraged me to adopt safer digital practices in my daily life.

Conclusion

This project provided me with a comprehensive understanding of **digital literacy and its importance** in both academic and professional environment. Through the various tasks I learned how to build a strong digital presence by creating and managing profiles on platforms like GitHub, LinkedIn, and Kaggle. These platforms will help me showcase my skills, connect with professionals, and explore future opportunities. I also gained practical experience in coding by solving problems on HackerRank, which improved my logical thinking and problem-solving abilities.

Additionally, I learned how to use Google Forms and Sheets for creating quizzes and managing responses, which are useful tools for collaboration and data organization. The email writing task helped me understand the importance of professional communication, while the social media checklist highlighted responsible online behavior.

The cybercrime awareness task made me more alert about online threats such as phishing and taught me how to stay safe on the internet.

Overall, this project enhanced my technical, communication, and digital safety skills, making me more confident and responsible in using digital technologies for my future growth.
