BHOPAL

Digital Student Portfolio
Mini Project Report

Submitted By: Shubh Gupta

Reg. No.: 25BAI10562

Under The Guidance Of: Dr. Kannan

LinkedIn

LinkedIn is a professional networking platform used to build connections, showcase achievements, and stay updated with industry trends. It allows users to create a digital resume, share posts, and interact with professionals from different fields. I plan to use LinkedIn to develop a strong professional identity by regularly updating my profile with my academic progress, certifications, and project work. I will connect with industry experts, seniors, and recruiters to expand my network and gain insights into career opportunities. Over the next four years, I also aim to actively engage with content related to technology, participate in discussions, and share my learning experiences. This will help me improve my communication skills and visibility in the professional community. By the end of my academic journey, I expect LinkedIn to serve as a powerful platform that reflects my growth, skills, and readiness for future career opportunities.

GitHub

GitHub is a widely used platform for hosting, managing, and collaborating on code. It provides version control using Git, allowing developers to track changes and work efficiently in teams. I plan to use GitHub as my primary portfolio platform where I will upload all my projects, including web development and other technical work. Over the next four years, I aim to maintain well-documented repositories that clearly showcase my skills and problem-solving abilities. I also plan to explore open-source contributions, which will help me collaborate with developers worldwide and gain real-world experience.

Additionally, I will use GitHub to practice consistent coding, improve code quality, and learn best practices in software development. By regularly updating my repositories and working on diverse projects, I intend to build a strong and impressive coding profile that will be valuable for internships and job opportunities.

Kaggle

Kaggle is a platform focused on data science, machine learning, and analytics. It provides access to datasets, competitions, and notebooks where users can learn and apply data-driven techniques. I plan to use Kaggle to develop my skills in data analysis and machine learning by working on real-world datasets. Over the next four years, I aim to participate in competitions, publish notebooks, and learn from the work of other data scientists. This will help me understand different approaches to solving problems and improve my analytical thinking. I also plan to build a strong Kaggle profile by consistently contributing and experimenting with new techniques and tools. By the end of my academic journey, I expect to have a solid foundation in data science and a portfolio of work that demonstrates my ability to derive insights from data and build intelligent solutions.
